2.4.1	Display Load Image Dialog Box.....	8
2.4.2	Display Enter Key Dialog Box.....	9
2.4.3	Display Encrypted Image and Show Its Path.....	10
2.4.4	Display Decrypted Image and Show Its Path.....	10

## 1. Scope

This document gives brief information about the design of the program. The systems of the program are determined and and relations are shown by use case diagrams. The use case diagrams are elaborated. Object classes are shown. Moreover, a GUI preview for the program is prepared.

**Project:** Image Security Program with 3DES

**Environment:** Windows

**Language:** C++

**IDE:** Qt

**Tools:** 3DES Algorithm, BMP Header

**Classes:** 3DES, Image, GUI

## 2. Object-Oriented Design Using the UML

### 2.1 System Context for the Image Security Program

### 2.2 Image Security Program Use Cases

**2.2.1 Use Case Descriptions**

<b>System</b>	<b>3DES</b>
<b>Use case</b>	Encrypt
<b>Actors</b>	GUI, 3DES, Image
<b>Dependency</b>	Only available if the "Encrypt" button is selected. GUI sends the image and the key.
<b>Description</b>	Encrypts the image with the key, using 3DES algorithm. Get pixel, Set pixel and Create new image use cases are used. The image cannot be opened after encryption. In the next dialog box, Dolphins logo will be seen as a preview of the new image.

<b>System</b>	<b>3DES</b>
<b>Use case</b>	Decrypt
<b>Actors</b>	GUI, 3DES, Image
<b>Dependency</b>	Only available if the "Decrypt" button is selected. GUI sends the image and the key.
<b>Description</b>	Decrypts the image with the key, using 3DES algorithm. Get pixel, Set pixel and Create new image use cases are used. The image can be opened after decryption only with the right key. In the next dialog box, the original image will be seen if the image can be opened. Otherwise, an error message will appear which leads the user to try again.

<b>System</b>	<b>Image</b>
<b>Use case</b>	Get pixel
<b>Actors</b>	3DES, Image
<b>Dependency</b>	Encrypt/Decrypt sends the image.
<b>Description</b>	Gets the pixels of the image.

<b>System</b>	<b>Image</b>
<b>Use case</b>	Set pixel
<b>Actors</b>	Image, 3DES
<b>Dependency</b>	Get pixel sends pixels of the image. Encrypt/Decrypt sends the key.
<b>Description</b>	Sets the pixels according to the operation desired.

<b>System</b>	<b>Image</b>
<b>Use case</b>	Create new image
<b>Actors</b>	Image
<b>Dependency</b>	Set pixel sends the new pixels.
<b>Description</b>	Creates a new image with the new pixels.

<b>System</b>	<b>GUI</b>
<b>Use case</b>	Load image
<b>Actor</b>	GUI
<b>Description</b>	The user loads an image. Load image checks whether the image selected is valid. If the image is invalid, it displays an error.

<b>System</b>	<b>GUI</b>
<b>Use case</b>	Get key
<b>Actor</b>	GUI
<b>Dependency</b>	Only available if the image is valid.
<b>Description</b>	The user enters a 24 character key.

<b>System</b>	<b>GUI</b>
<b>Use case</b>	Select operation
<b>Actors</b>	GUI
<b>Dependency</b>	Only available after a 24 character key is entered.
<b>Description</b>	The user selects encryption/decryption. This action triggers "Encrypt" or "Decrypt" use case to perform.

<b>System</b>	<b>GUI</b>
<b>Use case</b>	Save new image
<b>Actors</b>	GUI, 3DES
<b>Dependency</b>	Encrypt/Decrypt sends the new image.
<b>Description</b>	Saves the new image.

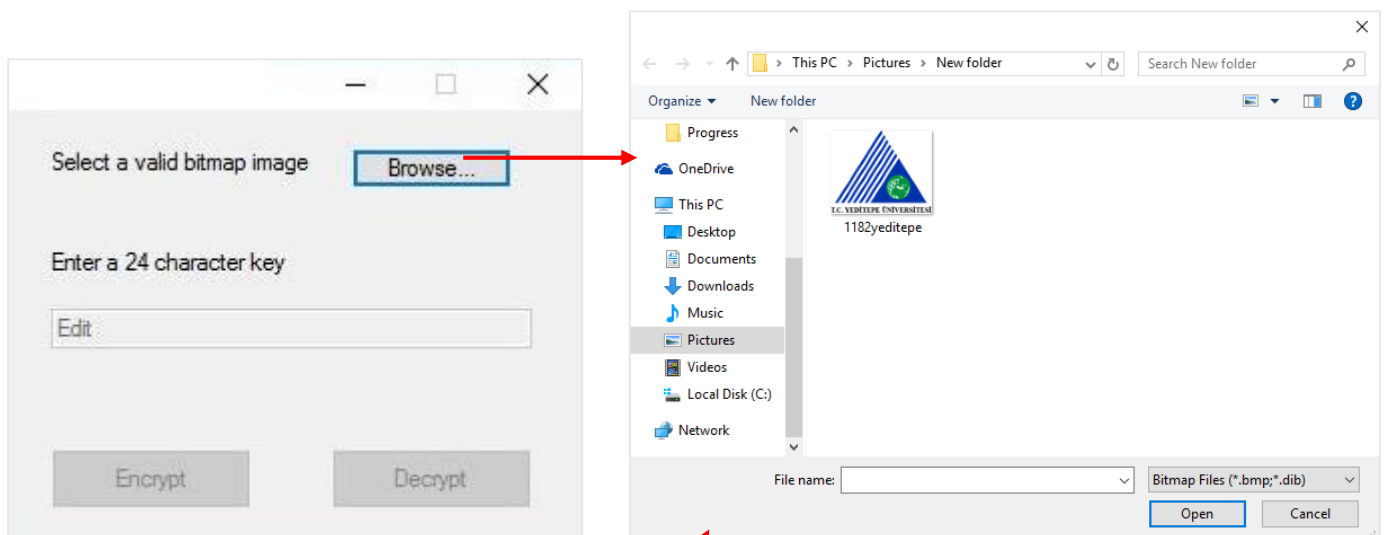

<b>System</b>	<b>GUI</b>
<b>Use case</b>	Get path of new image
<b>Actor</b>	GUI
<b>Dependency</b>	Only available after "Save new image".
<b>GUI Type</b>	Disabled
<b>Description</b>	Gets the path of the new image and shows it to the user.

## 2.3 Image Security Program Object Classes

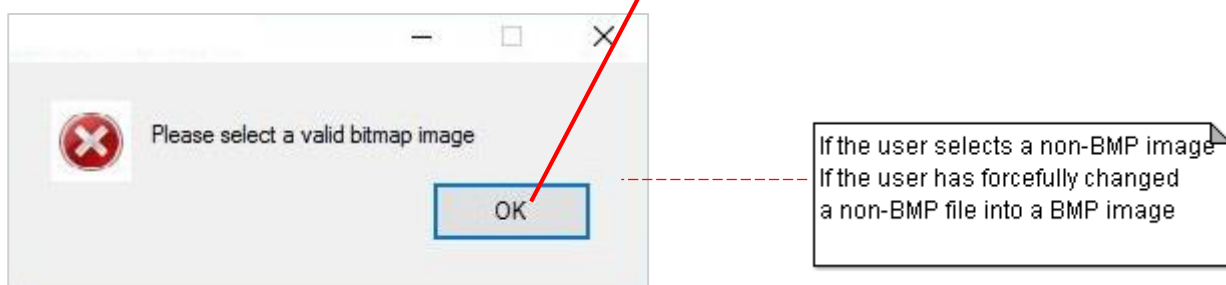

3DES	Image	GUI
key : String image : File operation : Integer	image : bitmap_image newImage : bitmap_image red : Char green : Char blue : Char redNew : Char greenNew : Char blueNew : Char height : Integer weight : Integer	key : String image : File path : String defaultImage : File newImage : File operation : Integer
encrypt() decrypt()	getPixel() setPixel() saveImage()	loadImage() getKey() selectOperation() saveNewImage() getPath()

## 2.4 GUI Preview of the Image Security Program

### 2.4.1 Display Load Image Dialog Box

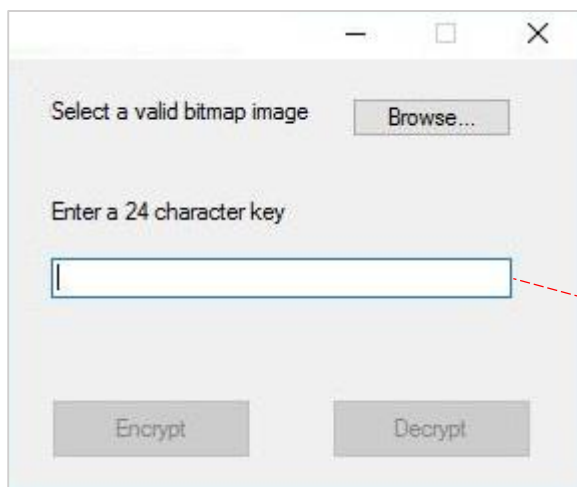

**Possible error:**

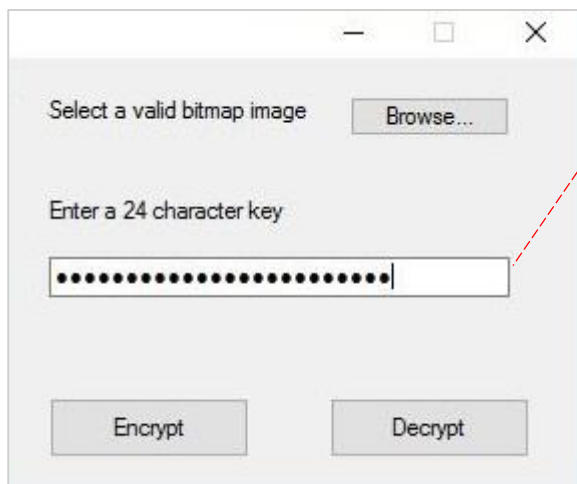

### 2.4.2 Display Enter Key Dialog Box

Select a valid bitmap image

Enter a 24 character key

Encrypt/Decrypt buttons become available when a 24 character key is entered

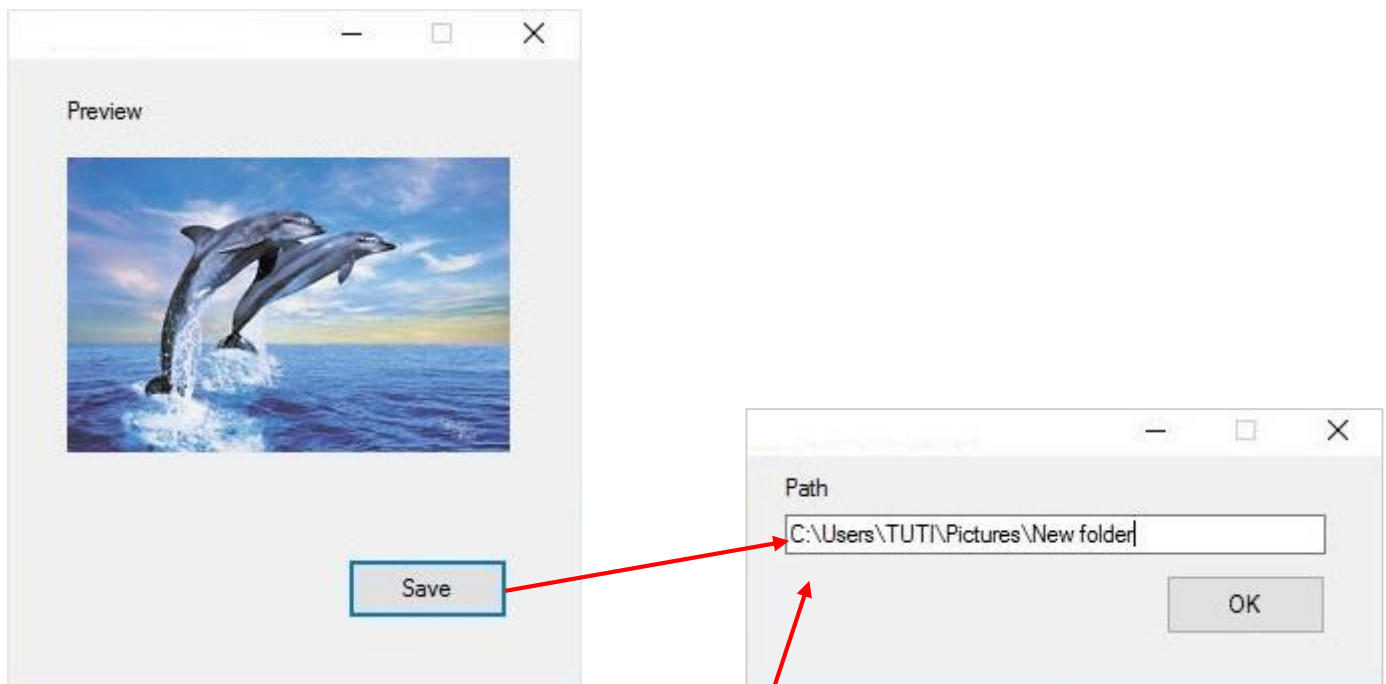

Select a valid bitmap image

Enter a 24 character key

### 2.4.3 Display Encrypted Image and Show Its Path

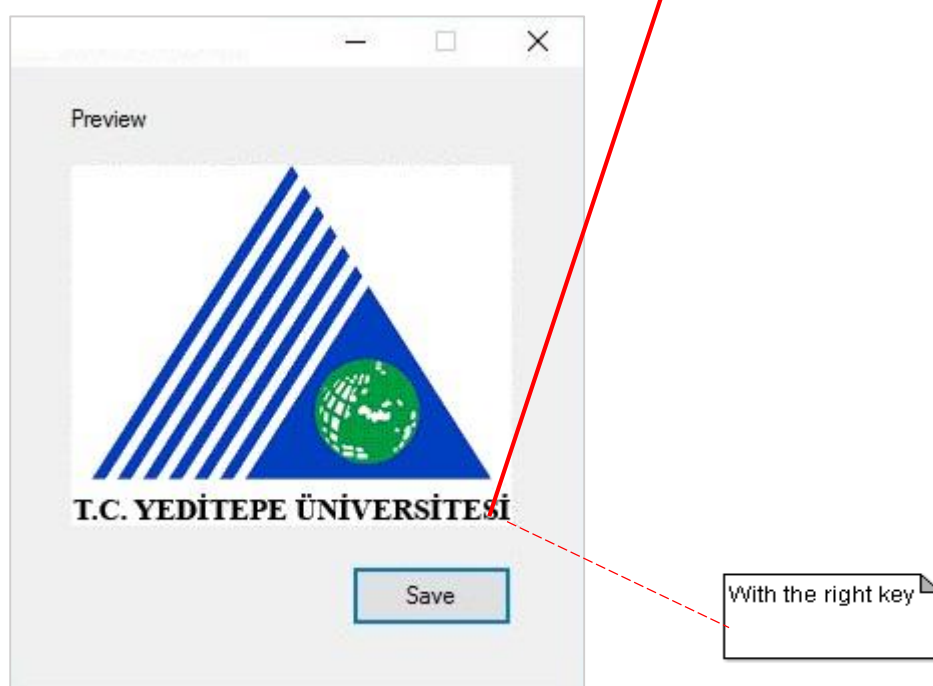

("Encrypt" button is pressed)

### 2.4.4 Display Decrypted Image and Show Its Path

("Decrypt" button is pressed)

Case 1:

**Case 2:**
